## ABOUT ME

I am a young developer with a willingness to learn. While majorly self taught I have managed to create simple application in C# for my portfolio while constantly looking for new ways to improve them.

For a nice reference point I have created my own website using **Bootstrap4, HTML5, CSS and javascript**. I will be updating this site more and more with time. I hope to add new features including a contact form where employers can enquire or contact me without going through the hassle of drafting a formal email.

I strive to be the best in my field and would love any opportunity to progress my skills becoming a better developer.

Outside of my career I have many interests such as motor sports, Cryptocurrency (I mine Bitcoin using my graphics card), Music and many more.

I am currently working towards a BSC with the open university, while I had previously completed 2 years with BT at the University of Suffolk. I had opted to restart my degree so that I can get the best possible marks on all of my assignments. I am aiming for a first in this degree.

Thank you for your time reviewing my application and considering me for the role.

## EXPERIENCE

### Universal Web Design, Lowestoft — *Head of Design & Development*

October 2020 - Present

Work using **HTML5** and **CSS** with custom **javascript** inserted where needed.

## **BT, Martlesham — Software Degree Apprentice**

October 2018 - August 2020

Worked with multiple languages in a professional office environment.

Worked on a project with a small team with 2 members working from Brazil on C# as a government contract. This project enlisted me for debugging and small error fixes across the project that the main developers did not have the time to handle. The project was an application that the emergency services will use when forwarding a call to the right service. Either fire department, police or paramedical. We even set it up for multiple services to be included in one call depending on the severity of the situation. This was made as a windows form application.

Worked with **ReactJS**, **React Native**, **Markdown** and **Git**. Using these languages we created a front end for our QA testers on an internal network. This allowed QA testers and even other teams to access our jira board for tasks relevant to the user. This saved us giving full access to the jira board which held sensitive information.

Worked with **NodeJS**, **Docker** and **MySQL**.

Completed 2 years of a bachelors whilst in this role.

## **McDonalds, Lowestoft — Crew Member**

July 2016 - May 2018

Served customers with enthusiasm offering a quick service.

Progressed in customer service skills along with gaining experience in a fast-paced work environment.

## **Starbucks, Lowestoft — Barista**
